

Forensic Audit Manual: SOH v2.0 Systems

1. Objective

Methodology to validate AI integrity via hardware-anchored evidence.

2. Protocol Steps

- Trace ID Lookup: Identify gRPC contract associated with the event.
- Entropy Correlation: Verify if Shannon Entropy (H) preceded Reflex (Omega).
- Reflex Validation: Confirm hardware block within 1.36 sigma window.
- Reprocess Audit: Analyze logs leading to deterministic stable output.

3. Legal Conclusion

The error never left hardware. Legal liability is mitigated by physical resilience, ensuring that 'hallucinated' data was never part of the judicial or kinetic record.
